SLIP. TRIP & FALL INVESTIGATIONS

INCODE has worked in the area of personal injury investigations for over 3 decades and we are aware that our clients are always looking at cost effective solutions in personal injury and liability (slip trip and fall) incidents.

Slip resistance under both wet and dry conditions is a crucial performance quality essential to the safety of pedestrians and is carried out to comply with building code regulations and OH&S requirements in the prevention of slip-and-fall accidents that lead to serious injury and expensive compensation claims.

Architectural and engineering firms, construction companies, floor covering manufacturers and the legal and insurance industries have used our services to make cost effective decisions regarding the safety and design of pedestrian surfaces.

Our Slip and Fall testing offers:

- Appraisal of BCA (Building Code of Australia) requirements and relevant Australian Standards applicable in terms of the incident location
- The relevance of other factors affecting safe access and passage including illumination levels and other environmental conditions relevant to the incident under study including special site constraints
- Ergonomics – the affect of physiological, psychological and social factors in terms of the conditions applicable
- The relevance of defective construction and defective workmanship in terms of the incident site
- Sporting surface control and conditions
- Affect of contaminants and pedestrian-way surface impediments
- Affect of changes in walking surface frictional characteristics
- All tests performed and recorded in accordance with the specified Australian Standards AS/NZS 3661.1-1993 and AS/NZS 4663-2002.
- Evaluation of the surrounding environment and any other physical conditions that may have contributed to the event
- Workplace design and organisational factors
- Expert Witness availability
- 24/7 availability
- Your choice of report format
- Your choice of wet/dry tests, both or a comprehensive analysis
- The support of a team of forensic engineers with over 50 years experience

We offer a wide spectrum of slip and fall related data analysis, from simple wet and dry slip test procedures to complex studies involving causation, environmental and ergonomic analysis.

All testing undertaken by qualified professional engineers.

Incode Pty Ltd, proudly serving Australasian & International Clients since 1965.
